

01 SMALL TALK

Do you usually fix your messages before you send them, or just send them right away?

When you write something important, do you use your own words or copy a template first?

Have you ever used AI to help you write a message or an email?

02 POP QUIZ — DOES THIS SOUND NATURAL?

1 ~~"My company is very welfare."~~

✓ "My company has great benefits."

welfare는 형용사가 아니라 명사예요. 회사 복지는 benefits나 perks로 말해요.

2 ~~"I want to develop myself."~~

✓ "I want to keep growing."

develop myself는 콩글리시 느낌이예요. grow, improve, develop my skills가 자연스러워요.

3 ~~"I resigned my job."~~

✓ "I quit my job."

resign은 보통 from과 같이 써요. 일상 대화에선 quit이 훨씬 자연스러워요.

03 오늘의 워업

각 질문에 A 또는 B 손가락으로 표시. 마음에 드는 거 하나만 짧게 이유.

WARM-UP

Quick Choice (5분)

- 1 Writing a cover letter: A) put job keywords first, or B) tell my real story first?
- 2 When I apply for a job: A) let AI help me write it, or B) write every word myself?
- 3 I want my application to sound: A) polished and professional, or B) natural and personal?
- 4 A computer reads my resume before a person: A) that's fine and modern, or B) that feels unfair?

AI-Scored Cover Letters — My Voice or Algorithm-Friendly?

BACKGROUND

AI가 이력서나 자소서를 먼저 걸러낸다고 생각하면 글을 쓰는 기준이 달라질 수 있어요. 예전에는 사람에게 내 경험을 설득력 있게 보여주는 것이 중요했다면, 이제는 채용 시스템이 어떤 키워드와 구조를 먼저 읽을지도 신경 쓰게 돼요. 문제는 전략적으로 쓰는 것과 나답게 쓰는 것 사이의 균형이에요. 직무 키워드를 넣고 문장을 정리하는 건 준비라고 볼 수 있지만, 너무 알고리즘에 맞추다 보면 실제 경험이 납작해 보일 수 있어요. 결국 좋은 자소서는 AI 필터를 통과하는 동시에, 사람이 읽었을 때 이 사람이 어떤 일을 해왔는지 선명하게 보여줘야 해요.

READ BEFORE WE TALK

If AI screens resumes or cover letters first, applicants may start writing differently. Instead of only asking, "Will a person understand my story?", they also ask, "Will the system find the right skills, keywords, and structure?" That creates a real tension. Adding job-related keywords can be smart preparation, but writing only for an algorithm can make a personal experience sound flat or generic. A strong application has to do both: pass the first filter, and still feel specific, believable, and human when an interviewer reads it later. This kind of screening changes the meaning of "good writing." A cover letter now has to be readable for software and memorable for a person. Too few keywords may hide a strong experience, but too many optimized phrases can make the applicant sound generic.

WORDS YOU MIGHT NEED

stand out — 눈에 띄다 come across as ~ — ~처럼 보인다/느껴지다

sound generic — 뻔하게 들리다

tailor it to the job — 그 자리에 맞춰 고치다

pass the filter — 필터를 통과하다 back it up — (말을) 뒷받침하다

TRY THESE PHRASES

I'd say keywords matter more now because the AI reads first, so ____.

The thing is, if your cover letter misses the right words, ____.

Honestly, it can happen — when you write for a filter, ____.

When I think about it, everyone ends up using the same phrases, and ____.

EASY ENTRY

- 1 Are you more of a 'write-from-the-heart' writer or a 'tailor-every-line-to-the-job' writer when you do a resume or cover letter?
- 2 When was the last time you updated your resume or cover letter, and what did you change?
- 3 Quick — if you had to pick, what do you polish first in an application: the keywords, your real stories, or the formatting?
- 4 On a scale of 1 to 5, how often do you wonder whether a computer or an AI reads your application before a real person does?

MAIN DISCUSSION

Q1. If AI reads cover letters first, do keywords become more important than honest experience?

↳ I'd say keywords matter more now because the AI reads first, so ____.

↳ The thing is, if your cover letter misses the right words, ____.

Q2. Can AI-friendly writing make your application sound less like you?

↳ Honestly, it can happen — when you write for a filter, ____.

↳ When I think about it, everyone ends up using the same phrases, and ____.

Q3. Is matching job keywords a smart strategy or forced self-packaging?

↳ It depends on the company, but usually matching keywords is just ____.

↳ I lean more toward calling it a smart strategy because ____.

Q4. Is AI screening efficient for companies or unfair to applicants?

↳ From the company's side it feels efficient, but for applicants ____.

↳ The way I see it, it saves time for big companies, yet ____.

Q5. If AI filters first and a human reads later, what should your application show most clearly?

↳ What I would show most clearly is ____ because numbers are easy to remember.

↳ If a human reads it later, the most important thing to show is ____.
